DETAILED ACTION

Claim Rejections - 35 USC § 101

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

2. Claims 17 and 18 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

Re Claims 17 and 18, the claimed pilot sequence represents a data structure or mere data is not tangibly embodied in a computer readable medium.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 17 and 18 rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Re Claims 17 and 18 lacks structure to perform to claim functions of performing frame synchronization and channel estimation.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 2663

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

6. Claims 1-16 are rejected under 35 U.S.C. 102(e) as being anticipated by Hosur et al U.S. Patent Number 6,356,605.

Re Claims 1, 14, fig 4 teaches the 408 for receiving code sequences with slot length for a radio frame according to a operating chip rate;

Wherein the 408 simultaneously receives STTD encoded pilot symbols via polarized paths 1 and j (See fig. 2) for performing auto-correlation and cross correlation in accordance to the propagation delay and locations of the code sequence whereby producing a frame synchronization signal (See col. 5, lines 1-55).

Re Claim 2, refer to Claim 1, wherein the 408 outputs frame synchronization signal according of equation 15 that adds the detected cross correlation values.

Re Claim 3, refer to Claim 1, the pilot symbols are of predetermined lengths, wherein shifting of the predetermined bit length is the operation of the correlator to measure the autocorrelation value.

Re Claim 4, refer to Claim 1, wherein it is inherent to determine the MAX correlation value for both pilot symbols encoded by the STTD encoder.

Re Claim 5, refer to Claim 3.

Re Claims 6, 7, 9-12, refer to Claim 1.

Re Claims 8, 13, 16, it is known that the MAX correlation is dependent of propagation delay, wherein MAX correlation is at delay '0'.

Re Claim 15, it is inherent that at pilot sequence correlation is based on reception position.
